

EXPLORATORY DATA ANALYSIS

Patient Readmission: EDA with Python

Perform an Exploratory Data Analysis (EDA) on the Patient Readmission dataset using Python in Google Colab.

Exercise Instructions

- Perform EDA on the Patient Readmission dataset.
- Use Python in Google Colab.
- Create suitable visualizations.
- Write observations throughout your analysis.
- Every line of code must contain a comment explaining its purpose.
- Use Markdown cells where appropriate.
- Your work should be original and reflect your own approach.
- A presentation will be required from each student.

LEARNING OBJECTIVES

By the end of this exercise you should be able to:

- Explore and understand a real-world dataset.
- Create meaningful visualizations.
- Interpret patterns and trends from data.
- Communicate findings through observations and presentations.

SUBMISSION REQUIREMENTS

Format: Google Colab Notebook (.ipynb)

Originality: All work must be your own.

Presentation: Each student will present their analysis and findings.

Every analyst started with exploring data.

Take your time, think critically, and tell the story behind the data.
